assignment

# Quality Assurance Engineer

## assignment

We have formulated an **assignment to assess your testing knowledge**. The assignment has been devised with manual and automation testers in mind. It consists of **two parts to test** your understanding of both subjects.

1.

As a preparation for the interview, go through the website:

<https://digitalpoirots.com/>.

While navigating the page, note the bugs found on the page and give suggestions for improving the page in the appropriate format.

2.

Create an automated Cypress test for testing <https://flask.io/app> functionality. The site is intended for easy sharing and use of the TODO list. It is necessary to cover the basic functionalities of the app that are available without login/registration.

### Conditions:

- please do both parts of the assignment
- we prefer to use Github or one of the repositories to share your code, or you can send it with a zip file
- try to complete the assignment in a week (do not forget we process assignments as they arrive)
